New door entry system with just 2 wires

Advantages

The range of Sfera equipment is now completed with the new "2-wire" system, with technical characteristics allowing to install intercom systems in small-midsized housing compounds with up to 100 flats. In special cases, it is possible to interface the new 2-wire system with the 8-wire digital system. The advantages offered by the new system are:

- **just 2 wires**
the new system is featured by a simplified cabling with just two wires
- **rational catalogue**
by adding just 3 items to the current catalogue, it is possible to carry out a new system
- **simple installation**
simplified cabling and easy configuration allow to reduce installation time and costs
- **wide variety of esthetic solutions for outdoor stations**
thanks to the integration in the Sfera line, the 9 esthetic solutions being proposed can meet any requirement
- **numerous functions**
even though the installation is extremely simple, the available functions are numerous:
 - possibility of having outdoor stations with numeric or alphanumeric digital call
 - different tone between outdoor station call and floor call
 - conversation secrecy.

Advantages

Several technical solutions allow an easy and quick installation of the system

- **nonpolarized connections**
all devices are connected by just 2 wires which have no polarity.
Thus, it is impossible to make wrong connections.
- **simple configuration**
to configure means to provide a digital device with an address.
This procedure, which may also be carried out by just one person prior to installation, is further simplified by using two configuration kits, which contain all the configurators required for systems up to 20 devices.

2-wire door entry system

Devices description

1. Sprint audio set (item 344212) with call volume control, door lock pushbutton and staircase light pushbutton.
2. Power supply (item 346000) in DIN 8-module enclosure, equipped with auto-reset thermal protections.
3. Voice module (item 342140) to be mounted in Sfera modular or monobloc pushbutton panel.
4. Actuator (item 346200) to operate the staircase light of different installations.

Functions description

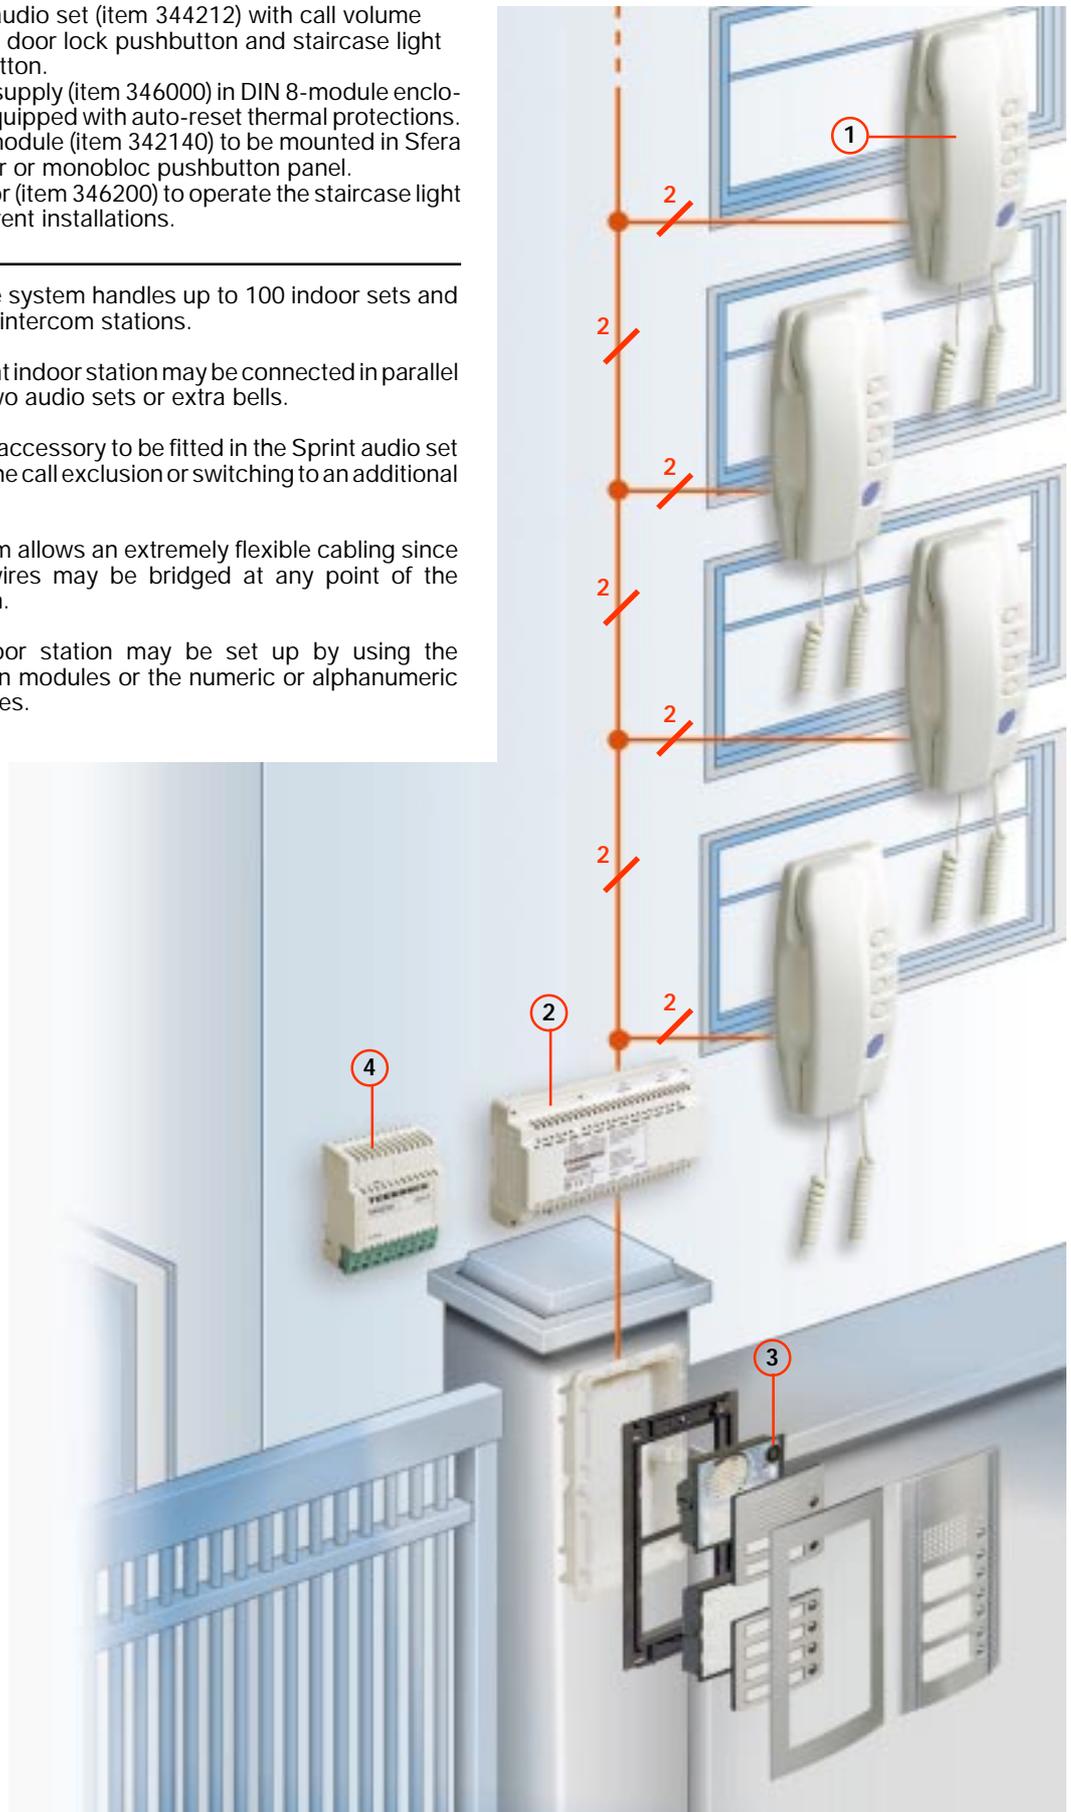

The 2-wire system handles up to 100 indoor sets and 9 outdoor intercom stations.

Each Sprint indoor station may be connected in parallel to other two audio sets or extra bells.

A specific accessory to be fitted in the Sprint audio set provides the call exclusion or switching to an additional bell.

The system allows an extremely flexible cabling since the two wires may be bridged at any point of the installation.

The outdoor station may be set up by using the pushbutton modules or the numeric or alphanumeric call modules.

Equipment modular assembly

Sfera pushbutton panels are featured by modular assembly, which allows maximum functional and esthetic flexibility; to this end, the electronic part (function module) is separated from the esthetic one (front cover). This feature allows to choose for the same system as much as 8 different esthetic solutions:

- **Sfera Modular** in colors: Allmetal, White, Alugray, Dark Ocher, Green Wagon, Red Mondrian, Blue Rietveld;
- **Sfera Monobloc** in color: Allsteel, Allbrass.

Sfera pushbutton panels are suitable for flush mounting or surface mounting assembly.

Wiring diagrams and configuration

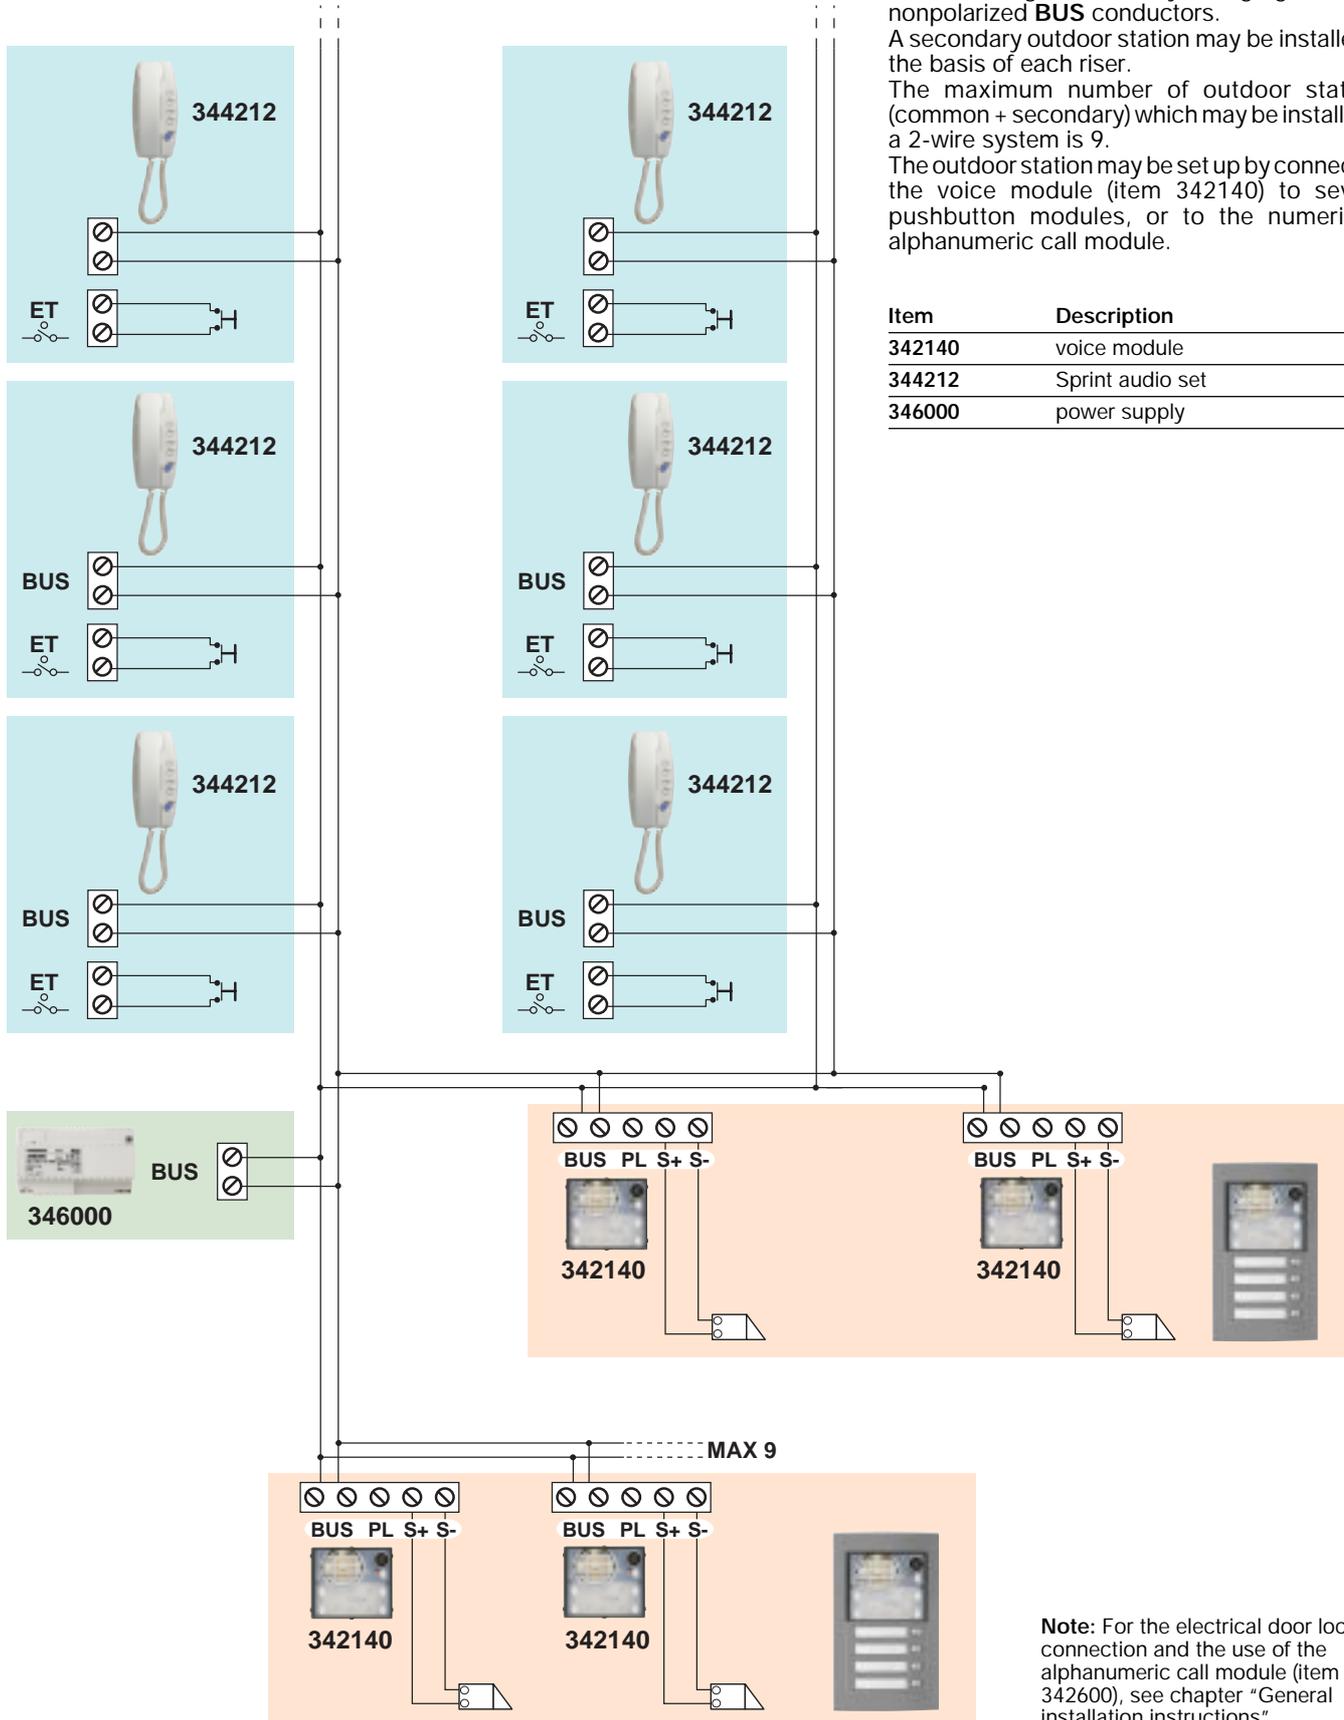

Wiring diagrams

Diagram for basic systems with one or more risers with several common indoor stations

Wiring diagrams

Diagram with several risers with secondary outdoor station for each riser

Risers are generated by bridging the two nonpolarized **BUS** conductors.
 A secondary outdoor station may be installed at the basis of each riser.
 The maximum number of outdoor stations (common + secondary) which may be installed in a 2-wire system is 9.
 The outdoor station may be set up by connecting the voice module (item 342140) to several pushbutton modules, or to the numeric or alphanumeric call module.

Item	Description
342140	voice module
344212	Sprint audio set
346000	power supply

Note: For the electrical door lock connection and the use of the alphanumeric call module (item 342600), see chapter "General installation instructions".

Equipment configuration

Voice module

N - Call number

Assigns matching between pushbuttons and indoor stations. In secondary riser outdoor stations, it must be configured with the number of the first intercom of the riser. In common outdoor stations with pushbuttons, it must be configured with 1. In outdoor stations with digital call module, it must not be configured.

P - Outdoor station number

The master outdoor station must not be configured. All the other outdoor stations (max. 9) must be configured progressively.

S - Type of call signal

The S configurator identifies the tone of outdoor stations bell.

0	1	2	3
two-tone 1200Hz 600Hz	two-tone 1200Hz 0Hz	two-tone 1200Hz 2400Hz	one-tone 1200Hz

T - Door lock relay timing

No. configurator	1	2	3	4	5	6	7
Operation. as pushbutton	1 sec.	2 sec.	3 sec.	4 sec.	6 sec.	8 sec.	10 sec.

Sprint audio set

N - Indoor station number

All indoor stations must be configured progressively from 1 to 99.

P - Extra pushbutton function

P	Pushbutton function
0	Staircase light pushbutton
1 ... 7	OS self-operation a/o actuator control

Actuator relay

The actuator may be used for the following functions:

- lights control
- extra door locks control
- generic actuations

Lights control function:

Actuator control:	Mod.	P/N	M
From indoor and outdoor stations pushbuttons	None	None	None
From indoor stations only	1	No. of the last indoor station of the riser	No. of the first indoor station of the riser
From one indoor station	3	N of indoor station from where actuator should be controlled	None
From one outdoor station	4	P of voice module from where actuator should be controlled	None

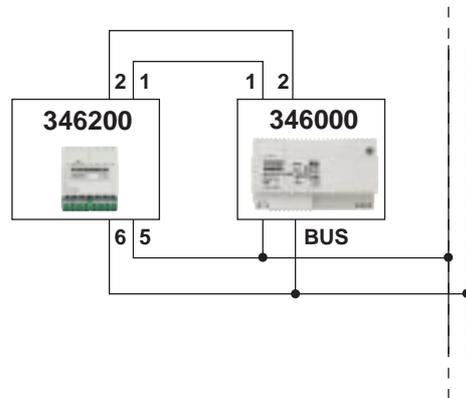

Generic actuations function:

Actuator control:	Mod.	P/N	M
From indoor stations self-operation pushbutton. The control is simultaneous with indoor and outdoor stations self-operation	9	Configure with a different number than P of outdoor stations	None

T timing:

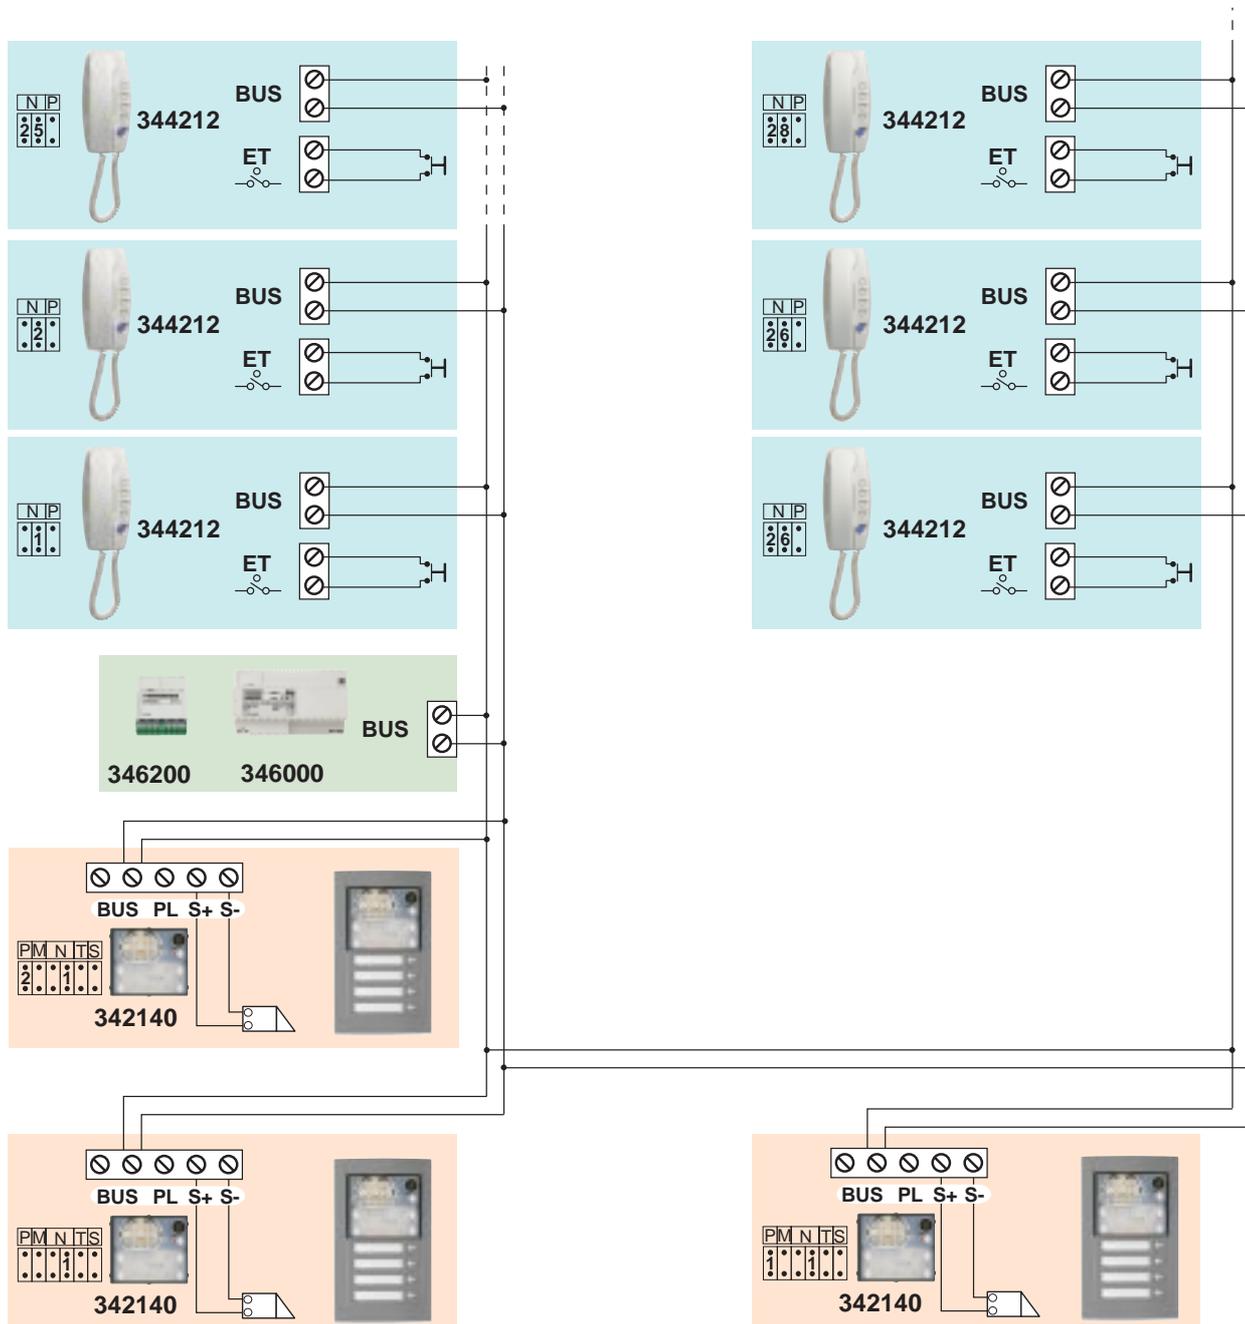

No config.	1	2	3	4	5	6	8	9
3'	1"	3"	6"	10"	1'	6'	pushbutton	cyclic

Connection

General installation instructions

Example of multi-riser installation with configuration

General installation instructions

Wires cross-section area

The following Tables indicate the wires cross-section area according to the distance between outdoor/indoor stations and power supply.

Table 1: Wires cross-section area for the outdoor station-power supply stretch

	Cross-section area (mm ²)			No. of outdoor stations
	0,28	0,5	1	
Max distance (m)	-	-	310	100 pushbuttons
	140	250	440	50 pushbuttons
	170	310	540	26 pushbuttons
	200	360	630	10 pushbuttons
	140	250	440	Numeric digital call with name-plate (100 names)
	160	300	500	Alphanumeric digital call

Table 2: Wires cross-section area for the indoor station-power supply stretch

	Cross-section area (mm ²)			No. of indoor stations
	0,28	0,5	1	
Max distance (m)	100	180	320	100
	150	260	460	50
	180	320	560	30
	220	400	700	10

The following Table indicates the wires cross-section area according to the distance between door lock and voice module.

Table 3

	Cross-section area (mm ²)		
	0,28	0,5	1
Dist. (m)	30	50	100

Example

Installation comprising an outdoor station with alphanumeric digital call 200m away from the power supply and 50 indoor stations (the farthest is 300m away from the power supply). The door lock is 25m away from the voice module. The power supply-outdoor station stretch must be

carried out with a 0.5mm² cross-section area wire (Table 1). The power supply-indoor stations stretch must be carried out with a 1mm² cross-section area wire (Table 2), while the lock must be connected with 0.28mm² conductors (Table 3).

Examples of possible installations

Outdoor station (O.S.)	No. of calls	Digital or pushbuttons
1	100	pushbuttons
2 (2 O.S. side-by-side)	64	pushbuttons
3	50	pushbuttons
4	38	pushbuttons
1 (2 secondary)	76 (38x2)	pushbuttons
1 (3 secondary)	50 (16 x 3)	pushbuttons
1 (3 secondary)	78 (26x3)	digital
1 (3 secondary)	100	digital

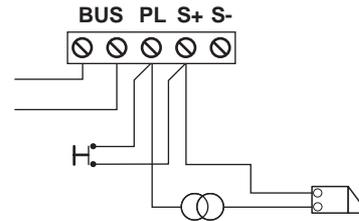

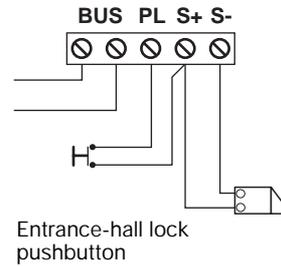

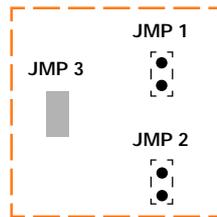

Note: The maximum number of pushbutton panels that may be connected to each voice module is 12 (i.e. 50 calls). If a greater number of calls is needed, one has to install 2 outdoor stations side-by-side.

General installation instructions

Door locks wiring to voice module

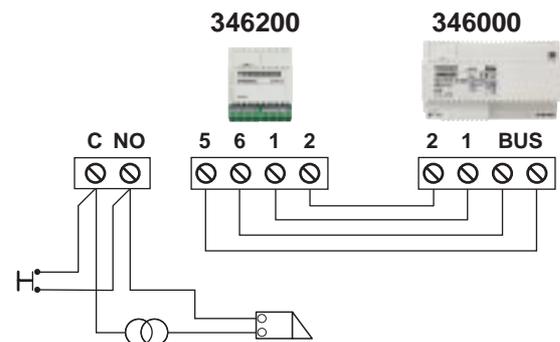

With power supply from voice module
 Connection of a door lock with 18V a.c. power supply, 4A dropout current and 250mA holding current.

With power supply from transformer
 Connection of a door lock using an auxiliary transformer. Voice module's jumpers must be set as indicated below.

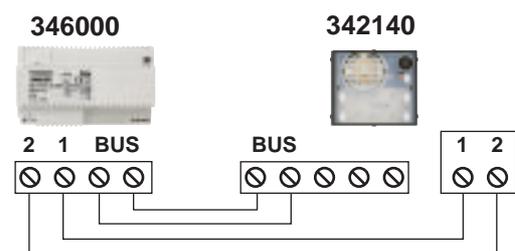

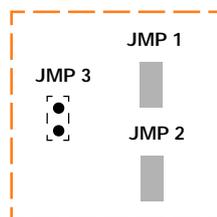

Electric door lock control with actuator relay

Connection of a door lock controlled by an actuator. The actuator must be configured with MOD = 5.

Alphanumeric call module wiring

In outdoor stations with alphanumeric call module, wiring must be done as indicated in the diagram on the side, and jumpers must be set as indicated below.
